The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/875,075

Applicant(s)

ENDO, HIROSHI

Examiner

Dohm Chankong

Art Unit

2152

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 August 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 29-49 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 29-49 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner:
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

Art Unit: 2152

DETAILED ACTION

1> This action is in response to Applicant's amendment, filed 8.31.2007. Claims 29, 35, 37, and 38 are amended. Claims 29-49 are presented for further examination.

2> This is a final rejection.

Response to Arguments

3> Applicant's arguments with respect to claim 29-49 have been considered but are moot in view of the new ground(s) of rejection necessitated by Applicant's amendment.

Claim Rejections - 35 USC § 103

4> The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5> Claims 29-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kamiyama et al. (U.S. Patent Number 6,674,541), hereinafter referred to as Kamiyama, in view of Pearce et al. (U.S. Patent Number 7,145,899), hereinafter referred to as Pearce, in further view of Itoi, U.S Patent No. 6,456,625.

Art Unit: 2152

6> Kamiyama disclosed a method for transmitting facsimile data between facsimile devices via an Internet protocol network that uses IP addresses corresponding to telephone numbers of the facsimile devices. In an analogous art, Pearce disclosed a method for routing call data or fax data through a packet-based network by using a number of call managers that control the telephony devices of the network. In an analogous art, Itoi discloses a system for accommodating existing telephone sets and internet phone devices within a computer network.

7> Concerning claims 29, 35, 37, and 38, Kamiyama did not explicitly state two separate categories of telephone numbers. Since Kamiyama does teach an address translation table, it would be a clear extension of his system to provide a separate table with the same functionality for any separate category of telephone numbers. Furthermore, Pearce does explicitly disclose two separate categories of telephone numbers as his system utilizes digit analysis that distinguishes between internal telephone numbers and external telephone numbers.

Although Pearce only teaches one registration information table, he does distinguish between the two categories of numbers (see Pearce, column 7, lines 36-54) so it would be a clear extension of his system to provide separate tables with the same functionality for any separate category of telephone numbers. For example, Itoi discloses providing multiple tables, each table storing a different category of telephone numbers that are mapped to network addresses [Figures 5-7 | column 8 «lines 4-10, 17-32»].

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system of Kamiyama by adding the ability to utilize two separate categories of telephone numbers as provided by Pearce. It would have been further obvious to one of ordinary skill to simply store Pearce's different categories of telephone numbers (internal and external) into separate tables.

Here the combination satisfies the need for a system that transmits facsimile data between facsimile apparatuses which can improve transmission quality of the facsimile data on an IP network (See Kamiyama, column 1, lines 40-47) and to provide the ability to store different categories of telephone numbers for managing relationships between the numbers and addresses (see Itoi, column 7, lines 9-12). This rationale also applies to those dependent claims utilizing the same combination.

8> Concerning claims 33 and 39, the combination of Kamiyama, Pearce, and Itoi did not explicitly state storing the address translation table / registration information table in the facsimile device or moving the functionality of the table from a gateway / call manager type device to the facsimile device itself. However, this type of distribution of network services in a communications network was well known in the art at the time of the applicant's invention. It was known that various services or processes could be accomplished by various devices in the network or distributed across various devices in the network without changing the overall functionality or purpose of the network itself. Furthermore, Pearce suggests as much. See Pearce, column 17, lines 44-51. Thus, it would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the combination of

Art Unit: 2152

Kamiyama and Pearce by storing the address translation table / registration information table in the facsimile device or by otherwise moving the functionality of the table from the gateway / call manager type device to the facsimile device itself.

9> Concerning claims 36, 40, and 43, the combination of Kamiyama, Pearce, and Itoi did not explicitly state transmitting the image through a telephone network. However, this functionality was old in the art as Kamiyama and Pearce both teach advancements over the telephone network by using an IP network. For example see Pearce, column 1, lines 36-39. Thus, it would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the combination of Kamiyama, Pearce, and Itoi by simply transmitting the image through a telephone network.

10> Concerning claims 44 and 45, the combination of Kamiyama, Pearce, and Itoi did not explicitly state designating priority for the different types of transmission of the image. However, controlling what data should be sent over what network was well known to one of ordinary skill in the art. One of ordinary skill would have readily realized the need to determine what data should be sent in what way when there are different transmission types and would have been able to designate priority for different transmission types or different data. One of ordinary skill in the art would have readily taken such steps in view of different qualities of transmission, different traffic loads, etc. on the different networks. For example see Kamiyama, column 1, lines 40-47. Thus, it would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the combination of

Art Unit: 2152

Kamiyama and Pearce by designating priority for the different types of transmission of the image.

11> Some claims will be discussed together. Those claims which are essentially the same except that they set forth the claimed invention as a method or an apparatus are rejected under the same rationale applied to the described claim.

12> Thereby, the combination of Kamiyama, Pearce, and Itoi discloses:

- <Claims 29, 35, 37, and 38>

An image communication system comprising:

a plurality of image communications apparatuses, each of which possessing a telephone number belonging to a first category of telephone numbers, a telephone number belonging to a second category of telephone numbers and a corresponding network address (Kamiyama, figure 1, items 1-31, 1-32, 1-41, 1-42);

a first address supplying device storing telephone numbers belonging to the first category of telephone numbers and not the second category of telephone numbers [Itoi, Figures 5-7, column 8 «lines 8-32» where : Itoi discloses storing a device's group number in one table while storing the device's direct number in a separate table], the corresponding network address of each one of the plurality of image communications apparatuses and a relationship between each one the telephone numbers belonging to the first category of telephone numbers and each one of the corresponding network

Art Unit: 2152

addresses (Kamiyama, figure 1, item 1-4 and column 5, lines 20-23, and Pearce, column 6, lines 39-61);

a second address supplying device storing telephone numbers belonging to the second category of telephone numbers and not the first category of telephone numbers [Itoi, Figures 5-7, column 8 «lines 8-32» where : Itoi discloses storing a device's group number in one table while storing the device's direct number in a separate table], the corresponding network address of each one of the plurality of image communications apparatuses and a relationship between each one of the telephone numbers belonging to the second category of telephone numbers and each one of the corresponding network addresses (Kamiyama, figure 1, item 1-4 and column 5, lines 20-23, and Pearce, column 6, lines 39-61); and

a judging section included in each of the plurality image communications apparatuses, said judging section included in one of the plurality of image communications apparatuses: (1) determining whether a telephone number input to the one of the plurality of image communications apparatuses belongs to the first category of telephone numbers or to the second category of telephone numbers, and (2) if the input telephone number belongs to the first category of telephone numbers, directing the input telephone number to the first address supplying device and (3) if the input telephone number belongs to the second address supplying device, directing the input telephone number to the second category of telephone numbers (Pearce, figure 2, item 104),

Art Unit: 2152

wherein said first address supplying device provides the corresponding network address of the input telephone number to the one of the plurality of image communication apparatuses if the input telephone number belongs to the first category of telephone numbers, and said second address supplying device providing the corresponding network address of the input telephone number to the one of the plurality of image communication apparatuses if the input telephone number belongs to the second category of telephone numbers (Kamiyama, column 2, lines 34-43 and Pearce, column 6, lines 39-61), and

wherein said first network address supplying device and said second address supplying device are separated by a computer network [Kamiyama, Figure 1 «item 1-2»].

- <Claim 30>

The image communication system of claim 29, wherein each of the plurality of image communications apparatuses, the first address supplying device and the second address supplying device are operably connected together by a computer network (Kamiyama, figure 1).

- <Claim 31>

The image communications system of claim 29, wherein each of the plurality of image communications apparatuses are connected to an outside telephone network and possess an outside telephone number for communication therethrough (Pearce, figure 1, item 20B).

Art Unit: 2152

- <Claim 32>

The image communications system of claim 29, wherein each of the plurality of image communications apparatuses are connected to an inside telephone network and possess an inside telephone number for communication therethrough (Pearce, figure 1, item 20A).

- <Claim 33>

The image communications system of claim 29, wherein the function of at least one of the first address supplying device and the second address supplying device is incorporated in at least one of the plurality of image communications apparatuses (obviousness as discussed in paragraph 12 above).

- <Claim 34>

The image communications system of claim 29, wherein the first category of telephone numbers corresponds to outside telephone numbers and the second category of telephone numbers corresponds to inside telephone numbers (Pearce, column 7, lines 40-43).

- <Claim 36>

The image communication method according to Claim 35, further comprising the step of: transmitting said image from said first image communication apparatus to said second image communication apparatus through one of a first telephone network and a second telephone network if said network address is not acquired (obviousness as discussed in paragraph 13 above).

- <Claim 39>

The image communication apparatus according to Claim 38, wherein said image communication apparatus is provided with said first address supplying device and said second address supplying device as function sections of said image communication apparatus (obviousness as discussed in paragraph 12 above).

- <Claim 40>

The image communication apparatus according to Claim 39, further comprising a second image transmitting section to transmit images to said another image communication apparatus through one of said first telephone network for use with said first telephone number and through said second telephone network for use with second telephone number (obviousness as discussed in paragraph 13 above).

- <Claim 41>

The image communication apparatus according to Claim 40, further comprising a signal receiving section to receive, when said second image transmitting section transmits a first image, using either of said first telephone number or said second telephone number, to said another image communication apparatus through either of said telephone network for use in said first telephone number or said telephone network for use in second telephone number, a signal containing a computer address provided to said image communication apparatus on a receiver side which is returned, in response to said transmitting of said image, from said another image communication apparatus and wherein said first image transmitting section is adapted to transmit a second image contained in said signal received by said signal

Art Unit: 2152

receiving section, based on said computer address of said another image communication apparatus, to said another image communication apparatus through said computer network (Pearce, column 6, lines 4-24).

- <Claim 42>

The image communication apparatus according to Claim 41, further comprising a storage section to store correspondence between said telephone number used by said image transmitting section when said first image is transmitted and received through either of said telephone network for use in said first telephone number or said telephone network for use in said second telephone number and said network address of said another image communication apparatus received by said signal receiving section when said first image is received (Pearce, column 6, lines 12-15).

- <Claim 43>

The image communication apparatus according to Claim 40, wherein said second image transmitting section, when said first image transmitting section fails to transmit said image based on said computer address through said computer network, transmits said image using either of said first telephone number or said second telephone number through either of said telephone network for use in said first telephone number or said telephone network for use in said second telephone number (obviousness as discussed in paragraph 13 above).

- <Claim 44>

The image communication apparatus according to Claim 40, further comprising an operation section to designate to whether priority is given to transmission by said

Art Unit: 2152

first image transmitting section through said computer network or to transmission by said second image transmitting section through said telephone network (obviousness as discussed in paragraph 14 above).

- <Claim 45>

The image communication apparatus according to Claim 44, wherein said operation section, when said first image transmitting section fails to transmit said image through said computer network, designates whether said image is to be transmitted by said second image transmitting section through said telephone network (obviousness as discussed in paragraph 14 above).

- <Claim 46>

The image communication apparatus according to 38, wherein said first category telephone line is a telephone line corresponding to a first telephone network; and said second category telephone line is a telephone line corresponding to a second telephone network (Pearce, column 7, lines 40-43).

- <Claim 47>

The image communication apparatus of claim 46, wherein said first telephone network corresponds to an inside telephone network and said second telephone network corresponds to an outside telephone network (Pearce, column 7, lines 40-43).

- <Claim 48>

The image communication apparatus according to Claim 38, wherein said first telephone network is an inside telephone network that is able to transmit and receive said image based on said first telephone number being said inside telephone number

Art Unit: 2152

(Pearce, figure 1, item 20A) and said second telephone network is an outside telephone network that is able to transmit and receive said image based on said second telephone number being said outside telephone number (Pearce, figure 1, item 20B) and wherein said computer network is either of an intranet or the Internet that is able to transmit and receive said image based on said network address being an IP address (Kamiyama, figure 1, Internet Protocol Network).

- <Claim 49>

The image communication apparatus according to Claim 38, wherein said number transmitting section transmits said input number through said computer network and said address receiving section receives said network address through said computer network (Pearce, column 6, lines 25-38).

13> Since the combination of Kamiyama, Pearce and Itoi discloses all of the above limitations, claims 29-49 are rejected for the reasons discussed above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Ogasawara et al, U.S Patent No. 5,675,638 - abstract;

Ford, U.S Patent No. 6,463,051;

Ranali et al, U.S Patent No. 6,539,077;

Yoshihara et al, U.S Patent No. 6,643,291;

Art Unit: 2152

McClung, U.S Patent No. 6.775.369;

Ohura, U.S Patent No. 6.807.166.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

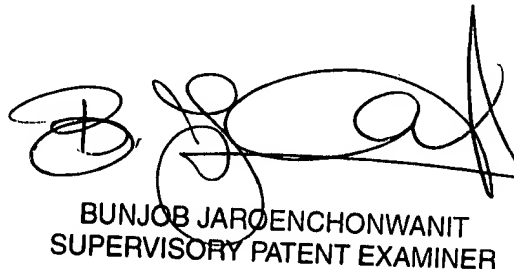

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dohm Chankong whose telephone number is 571.272.3942. The examiner can normally be reached on Monday-Friday [8:30 AM to 4:30 PM].

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bunjob Jaroenchonwanit can be reached on 571.272.3913. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
